

## Asset Tracking

### What is it?

This is a monitoring solution for outdoor field assets like machinery, boats on trailers, cable drums, road signs and anything of value that is outdoors and seldom moves. Any movement of the asset is an event and you would be notified.

### How it works?

The motion sensor of the unit watches for all motion and vibration. As soon as it detects one, the unit sends out a message to the Global GPS control centre and we then route it to you. Thereafter the location is sent at preset intervals for as long as the motion lasts. The unit can either be 4xAA alkaline battery powered or permanently installed in the equipment.

The GPS unit can be configured via the website to geo-fence the location of the equipment so that any motion outside of the virtual fence sets off the notification.

### The tracking unit

- Internal Antenna (makes for very discreet installation).
- GPRS/SMS - quad band unit - works on all continents.
- Patented motion sensor - unit sends location whenever it moves and at configured tracking interval while moving.
- Remotely (OTA) programmable.
- 1028 location stored in on-board memory.
- On-board geo-fencing beside the server provided by Global GPS.
- Inputs and outputs for external sensors.
- Internal over speeding detection mechanism.
- Highly configurable with run time meters and ability to configure unit start up and shut down times.

### What is required?

An account with Global GPS and a sim card from a service provider with GPRS or SMS capability.

### Where is it supported?

We support tracking globally and installation will be from our qualified technicians.

### What are the costs?

One time cost for the GPS hardware. Subscription is available in Australia, USA, Canada and India.

The SIM card for the GPS unit will be provided by us in the subscription model.

This is the most cost effective solution on the market today with all features of the higher end cost systems.
